

Adopt The Rational Unified Process In Half The Time... with cognence

Attempting to implement the extensive experience and best practices contained in RUP is daunting to take on all at once, and efforts often drag on longer than expected or fail entirely.

cognence has created RUP Adoption Accelerators that combine our proprietary APEX process for organizational change, RUP plug-ins that streamline project adoption, world-class process and tool training, and expert support / mentoring.

A Recipe For Success:

Ingredients:

- 1. Strategic Planning** that aligns your organization's goals versus just "winging it."
- 2. RUP Plug-Ins** that include streamlined RUP activities and templates that save time and headaches, as well as additional templates that facilitate key processes such as iteration and phase reviews.
- 3. Process & Tool Training** to get you up to speed quickly.
- 4. Hypersupport / Mentoring** from consultants who bring years of RUP experience to the table.
- 5. Customization / Tailoring** that results in a RUP & Rational tool implementation that fits in with your current processes, culture and business goals.
- 6. Optional CMMI Maturity Level 2 & 3 Plug-Ins** that help accelerate your compliance with this important industry standard.

cognence will help you blend these ingredients to improve your software engineering productivity and quality. As a Value-Added Partner of IBM Rational, **cognence** can give your RUP implementation a turbo boost with Rational's ClearCase, ClearQuest, RequisitePro, Build Forge, Portfolio Manager and others.

Give us a call today to find out how!

About **cognence**

cognence helps companies integrate standardized processes, automation tools, and training, increasing development productivity by 50% or more. As experts in software engineering best practices (RUP, Agile, CMMI) and leading software development platforms, **cognence** helps organizations build a repeatable, scalable engineering infrastructure that optimizes the performance of both software tools and people. **cognence** consultants work with key players at all levels of the organization to design and implement a plan that is in line with business goals and suitable to the environment. The result is higher quality products and services delivered in a shorter timeframe. The company is based in Denver, Colorado, and has worked internationally with companies including IBM, Toyota, Avaya and StorageTek.

“ I chose **cognence** to be the exclusive provider of my Software Project Management with RUP course in the US because of their extensive experience with Rational, their in-depth knowledge of all phases of the software engineering process, and their proven success in helping companies implement best practices. ”
